

Aperture Visual Web Solution™

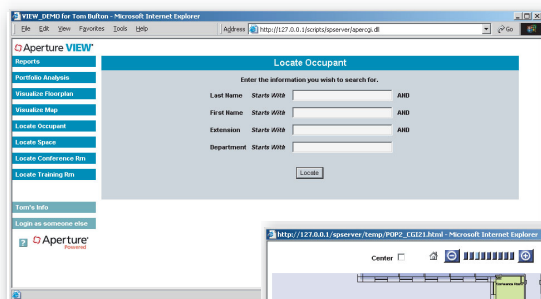

Increase the Value of Your Existing Solution

In today's business environment, issues such as cost avoidance, achieving operational excellence, delivering world-class customer service and providing information to management for better decision making are apparent throughout most organizations. Achieving these goals requires the aggregation and distribution of information about your organization's business in context - or in an actionable format. Information about your organization's business infrastructure - its people, space and assets - currently being managed in your Aperture solution is a critical part of running your business. Being able to effectively communicate this information to others in your organization can be the difference between a departmental tool and a high-value enterprise solution.

The Aperture Visual Web Solution enables Aperture customers to publish their existing project through a Web portal, providing key infrastructure information to others in their organization. With the Aperture Visual Web Solution, you can easily and quickly deliver actionable information to others in your organization with Locators, Reports and Visualizers.

Quickly Find People or Assets with Locators

Locators can be established on virtually any data tracked within your Aperture solution. With Locators, you can search for any person or asset in your organization. If you don't know the full name of the person or asset, you can type in the first few letters and choose from the matching results. Once you identify the exact person or asset, you can retrieve additional information and/or zoom to its exact location on an Aperture drawing. With Locators, you can publish an employee directory on your Intranet, search for conference rooms for a meeting, find IT assets for an audit, or locate data center equipment for faster problem resolution.

Locate employees, conference rooms, IT assets or data center equipment

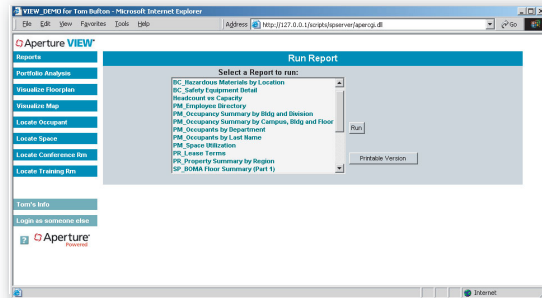

Application Capabilities:

- Get unlimited Aperture Client licenses with the Aperture Visual Web Solution
- The Aperture Visual Web Solution adds many additional benefits for BOTH customer with and without SmartPictures
- Apply the Aperture Visual Web Solution to ANY existing Aperture solution
- Control exactly what information is published and who can see it
- Each individual user has his own login and gets a personalized experience

Aperture Visual Web Solution™

Provide Easy Access to Reports

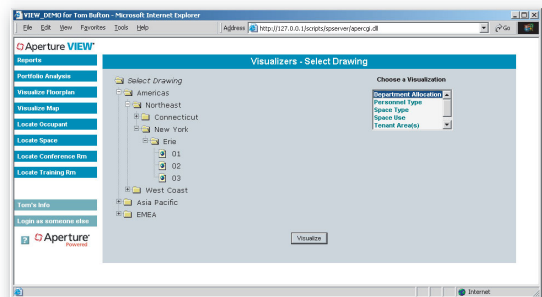

Now you can take your Aperture reports and provide single click access to anyone in your organization. You can provide access to chargeback or vacancy reports, asset inventories or space utilization analysis to anyone in your organization.

Run any Aperture report with a single mouse click from a Web portal

Deliver Actionable Information with Visualizers

The Aperture Visual Web Solution enables you to provide easy and intuitive access to any drawings in your Aperture project. You can deliver colored floor plans, proposals and raised floor space drawings to analyze current utilization and plan for future growth. You can allow users to select a drawing, over the Web, to run a report across. You can design a hierarchy of drawings, which enables users to intuitively navigate and easily find the information they need to be more productive or make key decisions.

Provide quick, intuitive access to visual information over the Web

The Aperture Visual Web Solution can be applied to any Aperture solution and you control exactly what information is published. It doesn't matter what Aperture software you currently own - the Aperture Visual Web Solution can be applied to your solution and provide enhanced capabilities to your organization.
